COBALT 10

Cobalt for the road. The Cobalt 10 lighting control desk is the sporty member of the Cobalt family, packing all the functions and capacities of the larger Cobalt 20 desk into a compact footprint sized just right to go on tour or fit into a cramped control room. Cobalt 10's built-in, articulating, 12-inch, high-resolution, multi-touch screens and master playbacks – 10 motorized faders and 10 backlit, color-coded endless pots with dedicated buttons – make any show possible, even in small spaces. The desk controls up to 5,000 devices (dimmers, LEDs, moving lights or media servers) on up to 32 universes of output (16,384 parameters) without the need for additional processing hardware.

Nothing in your way. Cobalt 10's short commands and direct-access screen-based tools eliminate any barrier between you and the light. Interactive controls available on the screens let you manage data swiftly and deftly, without stumbling over complicated syntax. You can customize thousands of devices in the library to fit your working style, and build your show with groups, palettes and presets. And with effect playbacks, Cobalt 10 lets you configure effects on conventional fixtures, moving lights, LEDs and other sources.

Masters make anything possible. Cobalt 10's Masters give you unlimited possibilities for content. You get to customize the console so every playback, every button, fits the way you build or play back your show. You're free to use the Masters on screen, add ETC fader wings or use third-party USB-MIDI panels.

Make it your own. With Cobalt 10, you choose how your looks are stored and played back. You pick where to put information and controls. And you decide how your channel displays are built – with channel icons or fixture symbols – and how channels are mixed with other selection tools for direct access to groups and palettes.
