GENERAL INFORMATION

The Pro Eight-Cell luminaire is suitable for long throw applications and is ideal for use in locations where hanging space is limited. The Pro Eight-Cell is equipped with a yoke offering maximum focusing flexibility. Manufactured from high-grade, powder-coated aluminum and steel, the luminaire is entirely convection cooled, meaning zero noise emission.

The Pro Eight-Cell luminaire connects directly to a mains supply and is supplied complete with an onboard power supply. Intensity control is achieved either with a direct, wired-DMX connection to the luminaire's RJ45/etherCON connectors, or wirelessly using the separate ArcMesh Transmitter.

ArcSystem has been specifically developed for auditorium lighting applications where high-quality, extremely accurate and smooth dimming is required. The use of onboard device management in the driver allows all luminaires to be addressed remotely, ensuring fast and simple installation.

EMERGENCY CONNECTION

A dual-input emergency version of this luminaire is available. Emergency luminaires require two line-voltage inputs that perform the following functions:

- Normal power/emergency power
- Normal power sense input

The sense input is used to detect whether normal utility power has been lost. This will force the luminaire on at 100% intensity running from the maintained supply. There is no control of the luminaire via wireless- or wired-DMX until normal utility power is restored to the sense input.
