

**Products Affected:**

CTI# 3300 & 3303 Aquafog 3300™

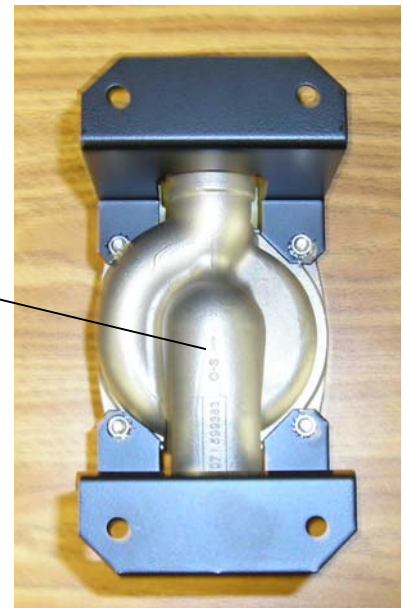

**Overview:**

**A change has been made to the CTI# 3300 and CTI# 3303 Aquafog 3300 regarding the replacement of pumps.**

**Details:**

In the event you need to replace the pump on your CTI# 3300 or CTI# 3303 Aquafog 3300, it will come with a new mounting bracket. Replacement units will fit into existing Aquafogs in much the same way, just with a few differences.

The new replacement unit is shown in the pictures to the right. While the pump differs in shape, it will function the same. The mounting bracket shown to the right will come pre-assembled on your replacement unit as shown. As you remove your old pump, note the direction the arrow is pointing on the pump metalwork. The new pump has a small arrow denoting water flow imbedded in the casting. As you install the new unit onto the mounting studs, make sure the arrow is pointing in the same direction. As always, City Theatrical, Inc. Technical Services staff are available to answer any questions you may have.
