SM-RELAY4
Quad Relay Smart Module

Overview

Smart modules add additional functionality and connectivity to select CueServer 3 models by plugging them into an available module slot.

Use the **SM-RELAY4** module to interface to devices that require signal-level dry contact closures. These may include low voltage indicators, buzzers, projection screens, window covering motors, security systems, and more.

Each **SM-RELAY4** module adds four Form-C style signal level relays. Each relay can be opened or closed via software.

The **SM-RELAY4** is provided with a 12-position pluggable spring cage terminal block for easy field wiring. The terminals include the standard Form-C relay connections (Normally Open, Normally Closed, and Common) for each of the four signal relays.

Additionally, an LED indicator on the module provides at-a-glance operational status.

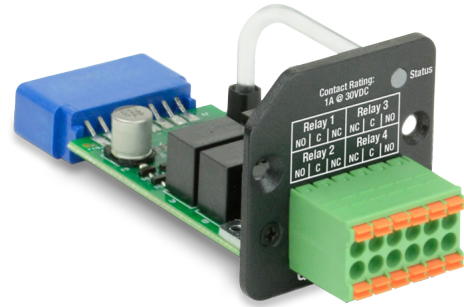

SM-RELAY4
Quad Relay Smart Module

Features

- Provides 4 signal level Form-C relays
- Each relay is software controlled
- Relays have a 1A @ 30VDC current handling capacity
- Built-in status indicator LED

Ordering

SM-RELAY4   **Quad Relay Smart Module**
Includes 12-position pluggable terminal block

> **Warning:** Do not connect voltages above 30V (such as line-level or mains voltage) to the **SM-RELAY4** module.
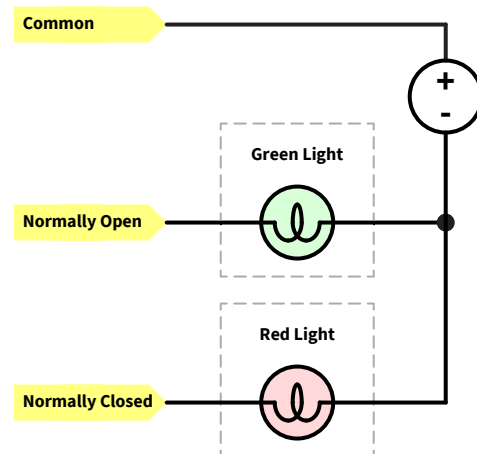

Internal Relay Connections (x4)
